ABOUT ME

Software engineer with hands-on backend experience in .NET and a machine learning background from academic research. Comfortable across the full stack but focused on backend architecture, API design, and increasingly on integrating AI/LLM features into production systems. Delivered features in Agile teams both during a professional internship and in self-directed projects.

TECHNICAL SKILLS

Programming Languages:

Proficient in: C#, Java
Strong command of: Python

Web Development:

.NET, Laravel, React, REST APIs, HTML, CSS

Databases:

MySQL, SQL Server, MongoDB, PostgreSQL

Version Control & Tools:

Git, GitHub, Visual Studio, Visual Studio Code, Agile / Scrum, Clean Architecture

LANGUAGES

- English - C1 Advanced (Cambridge English Certificate, 2020)
- Serbian (native)

ALEKSA VLAŠKI

JUNIOR SOFTWARE ENGINEER

EXPERIENCE

Software Engineering Intern | Orion Innovation

- Worked in a 10-member Agile (Scrum) team on a full-stack medical scheduling system, taking ownership of the patient/doctor/appointment management feature set from planning through delivery
 - Used GitHub feature-branch workflow (PRs into dev/main) and participated in sprint planning and code reviews; the team worked independently and presented the finished system to senior engineers at the end
 - Also spent significant time learning Swift/SwiftUI, building an iOS app (MVVM, async/await, Codable)
- Feb 2026 - Jun 2026

Medior Technical Operator (Part-Time) at 365 Lab | Belgrade, Serbia

- Provided on-site technical support for live production events, handling setup, connectivity, and real-time troubleshooting to ensure smooth client-facing operations.
- Jul 2023 - Jan 2026

PROJECTS

Medical Appointment Application

.NET 8, EF Core, SQL Server, React, TypeScript, OpenAI API

- Full-stack medical scheduling system: ASP.NET Core backend (Clean Architecture across Domain/Application/Infrastructure/API layers), React/TypeScript frontend, and a C++ CLI admin tool
- Designed and implemented the RESTful API endpoints and business logic for patient/doctor/appointment CRUD, slot-availability rules, filtering, and CSV export, using EF Core against SQL Server
- The system also included AI-assisted scheduling (OpenAI API) for natural-language booking requests

Fitness Training Booking System

Java, MySQL, Client-Server Architecture

- Developed a Java client-server application using Sockets and MySQL for user management and session scheduling
- Implemented authentication system, relational database design, and server-side business logic handling concurrent client connections

Full Stack Food Delivery Application

Laravel, React, MySQL

- Built a full-stack food delivery application using React frontend and Laravel REST API backend
- Implemented JWT authentication, order management system, and Axios-based API communication
- Designed relational database schema supporting dynamic restaurant browsing and order processing

Stock Price Trend Prediction with Machine Learning

Python, Scikit-learn, NumPy, Pandas

- Built a neural network system to predict stock price trends using financial ratios of healthcare companies
- Implemented full ML pipeline including data preprocessing, feature engineering, and model selection
- Compared feature aggregation strategies to improve model stability across different prediction horizons

EDUCATION

Bachelor of Science in Information Systems and Technologies

OCT 2021 - FEB 2026

Faculty of Organisational Sciences, University of Belgrade

GPA: 9.32/10.00

High School Diploma in Electrical Engineering

SEP 2017 - JUN 2021

High School of Electrical and Technical Sciences "Nikola Tesla", Pancevo

GPA: 5.00/5.00
